ANNUAL REPORT

TO THE

RURAL DISTRICT COUNCIL

OF

GLANFORD BRIGG,

FOR THE

YEAR ENDING DECEMBER 31ST, 1905,

BY

GODFREY GOODMAN,

MEDICAL OFFICER OF HEALTH.

BRIGG:

J. ASHTON & SONS, PRINTERS, CRESSEY YARD.

TO THE

CHAIRMAN AND MEMBERS

OF THE

RURAL DISTRICT COUNCIL

OF THE

GLANFORD BRIGG UNION.

----:-

February, 1906.

LADIES AND GENTLEMEN.

I beg to present my Report for the year ending December 31st, 1905.

The number of births registered during the year, in the whole Births District, was 688; males 336, females 352. This is eleven more than last year's total. With one exception, it is the largest number recorded for ten years.

The birth-rate was 28.8 per 1,000. The average birth-rate Birth-rate for the District is 28.1.

The births were distributed as follows:-

		Males	Females	Total
Brigg Sub-District		112	 115	 227
Barton Sub-District		88	 99	 187
Winterton Sub-District	••••	136	 138	 274
		336	352	688

It will be seen that the number of births registered in the Winterton Sub-District, (which has a population of 7,529), exceeded by 87, those registered in the Barton Sub-District, with a population of 8,568. As I mentioned in one of my former Reports, this indicates a more prosperous condition in the first-mentioned District.

The birth-rate of the sub-districts was as follows:-

Brigg Sub-District			29.3	per	1,000
Barton Sub-District	••••		21.8	per	1,000
Winterton Sub-District		••••	36.3	per	1,000

The birth-rate in the Winterton Sub-District is above the average. That in the Brigg Sub-District has improved, but is still lower than it should be. That in the Barton Sub-District has been gradually falling, and has now reached an exceedingly low level.

In the following table will be found a classification of births, in the whole and each of the sub-districts, for the last ten years.

		Brigg		BARTO			NTERT			Wholi	
	Sub-	DISTRICT.	Sub-	Distr	ICT.	SUB-	Distr	ICT.	Sub-	DISTE	HCT.

1088 1004 2092 1129 1076 2205 1227 1121 2348 3444 3201 6645

The number of deaths registered during the year, in the Deaths whole District, was 331; males 160, females 171. This is eighteen above last year's total.

The death-rate was 13.9 per 1,000. The average for the Death-rate Whole District District is 14.0.

The deaths were distributed as follows:—

		Males	F	emales		Total
Brigg Sub-District		50		50		100
Barton Sub-District	••••	52		57		109
Winterton Sub-District		58		64		I 22
			-		-	
		160		171		33 I

The death-rate for the sub-districts was as follows:-

Brigg Sub-District	 	12.0	per	1,000
Barton Sub-District	 	12.1	per	1,000
Winterton Sub-District	 ••••	19.1	per	1,000

The following table contains a classification of the deaths which have occurred in the District during the last ten years.

	Sub	Brigg Barton Sub-District. Sub-District.			Winterton Sub-District.			Whole Sub-District.

DEATHS IN CHILDREN UNDER ONE YEAR.

The number of deaths in children under one year, registered in the whole District, was 63; males 37, females 26.

The infant death-rate was 90 per 1,000 births.

Infant Mortality

The average infant death-rate for the District is 119. The rate is the lowest recorded for ten years.

The following table, which gives the principal causes of these deaths, is copied from the death returns supplied to me.

Bronchitis		••••	••••		4
Pneumonia		••••		••••	4
Diarrhœa	••••	••••			7
Convulsions			••••	•••	10
Marasmus		••••	••••	••••	6
Premature Birth	1				9
Enteritis	••••			••••	5
Whooping Coug	gh	••••	••••		I
Influenza	••••		****	****	I
All other cause	s				16
					63
					_

The deaths were distributed as follows:-

			Deaths	L	Death-rate
Brigg Sub-District			17		21
Barton Sub-District	••••	••••	I 2	••••	22
Winterton Sub-District			34		31

The Winterton Sub-District has always the highest infant death-rate.

Diseases under the Notification Act.

The number of cases under the Infectious Diseases Notification Act, which were notified, was 162, made up as follows:—

Scarlet Fever	••••	••••			61
Diphtheria					61
Typhoid Fever	••••		••••		27
Erysipelas			• • • •	••••	9
Puerperal Fever			••••	****	4
					162

This is eight above last year's total, but is still below the average for the District.

The number of cases of Scarlet Fever notified, (61), is the Scarlet Fever lowest figure recorded for ten years.

The number of deaths from this disease was 5. This is the highest mortality for Scarlet Fever recorded during the same period.

The cases and deaths were distributed as follows:--

				61		
Winterton Sub-Distric	ct	••••	••••	10	••••	I
Barton Sub-District	••••	••••	• • • • •	37	• • • •	3
Brigg Sub-District	••••	••••	••••	14	• • • •	I

The majority of the cases ocurred in the Barton Sub-District, chiefly in the villages of Barrow and Goxhill.

In connection with the Goxhill outbreak, I had to report to the Council a case where milk, having been exposed to the infection of Scarlet Fever, was sold to the public. This milk-seller was prosecuted by the Council for failing to notify that he had Scarlet Fever in his family. The case, however, was dismissed. The Bench being of the opinion that the evidence before them was not sufficient to prove that this man was aware he had Scarlet Fever in his house.

The following brief account of the case, will, I believe, be sufficient to show that the Council was justified in taking proceedings.

Milkseller. 16 cows' milk sold in and outside the District. Case Son, aged 14 years, died of Scarlet Fever, two days after the case had been notified. Father acknowledged that this boy had been ill for some time, also that the other children had been ill with what appeared to be a similar complaint, but he did not know it was Scarlet Fever. Believing this statement to be true, the man was cautioned, and the case dropped. The maid, an intelligent girl of twenty, (who lived in the house until ten days after this, when she went home ill with Scarlet Fever), made the following statement which she afterwards swore to. All the children had been ill, they had a rash and sore throat. All afterwards peeled. She told their mother it was Scarlet Fever. The mother when she saw the doctor coming locked the children up in a room. The girl attended to the children all the time, including the one who died; even after the case was notified she had to go into the sick room and perform duties, which, by their very nature, must have rendered her highly infectious. All this time she was milking and attending to the milk, frequently going straight from the sick room to the milking. The man did the same, even after the case was notified, (this he acknowledged to me). The girl also stated that this man

lost his temper, and high words resulted because the doctor had put Scarlet Fever in the death certificate.

The number of cases of Diphtheria notified was 61. This is Diphtheria the highest figure recorded for ten years.

The number of deaths registered from this disease was 5. This is below the average, as may be seen on referring to the table of infectious diseases with deaths for the last ten years, given later on.

Table of cases and deaths in sub-districts.

			Cases	L)eaths
Brigg Sub-District		••••	15		I
Barton Sub-District	••••	••••	3	••••	I
Winterton Sub-District	••••	••••	43	• • • •	3
					_
			61		5

The majority of the cases occurred in the Winterton Sub-District, chiefly in the village of Messingham. The outbreak, which commenced at the end of August continued until the end of the year. Most of the cases were mild, and, as is always the case, the milder the outbreak, the longer it lasts, and the greater the difficulty of stamping it out. Some cases never come under medical treatment, they are kept indoors for a few days, and then, before they are free from infection, are let out to infect their neighbours. It is difficult to prevent this, even in the notified cases, if they are of a mild type. We frequently hear of it, but it is almost impossible to get a witness to come forward and give evidence. What, however, more than anything else, tends to spread the infection, is the visiting of neighbours to infected houses. It is not at all unusual, on entering a house, to find several neighbours, often with children in their arms, beating a hasty retreat from the patient's room. Such persons, as a rule, are uninfluenced by any warning you may give them.

In the Brigg Sub-District, the village of Barnetby suffered most from this disease. In a report to the Council, I pointed out the dangerous practice of depositing night soil in the small gardens, close to the wells, at the back of Silver Street. This had been going on for some time, and as the soil is porous, and the gardens small, the wells were in great danger of pollution. Since then a night soil cart has been purchased, and the practice has been discontinued.

There were 27 cases of Typhoid Fever notified.

The number of deaths from this disease was 2. This is below the average.

Table of distribution of Typhoid Fever and deaths in the sub-districts.

			Cases		
Brigg Sub-District	••••		8		2
Barton Sub-District	••••	••••	3	••••	0
Winterton Sub-District	••••		16		0
					_
			27		2

The majority of the cases occurred in the Winterton Sub-District, chiefly in the villages of Ashby and Messingham. In the latter village, a labourer contracted Typhoid on August 19th. On September 20th, a child in the same family, took the disease. The grandmother, who lives in the same yard, took the child into her house. Shortly after, this man's wife, who, up to now, had been nursing him, also contracted the fever. A relative, who had been assisting, refused to attend. These having a few shillings a week to live on, the Council, after considering the circumstances, decided to provide a trained nurse. A nurse was at once engaged, and continued in attendance for five weeks. She nursed and attended to the three cases, giving entire satisfaction. All the patients recovered, and no other case occurred in the yard.

In the Brigg Sub-District, the cases were not confined to any particular village.

Erysipelas.

There were 9 cases of Erysipelas notified with no deaths.

Puerperal Fever.

The number of Puerperal cases notified was 4. Two were in the Brigg, and one in each of the other sub-districts.

There was no death recorded from this disease.

Measles.

The District was exceptionally free from Measles during the year.

No death occurred from this disease.

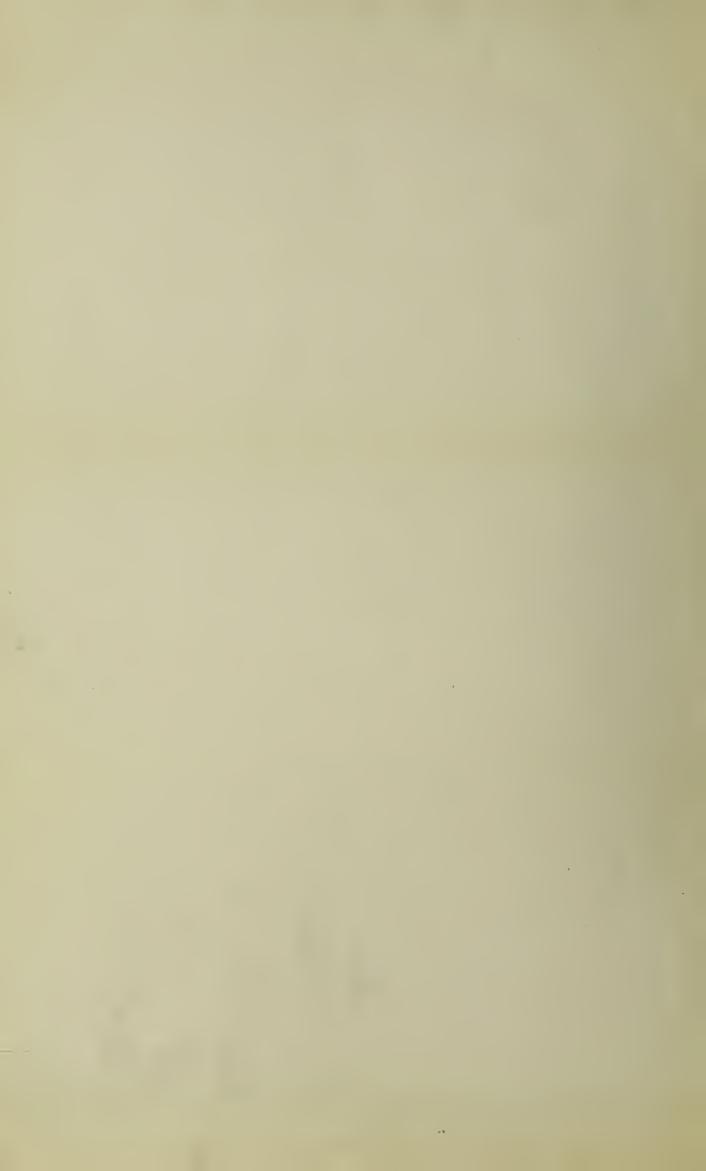

Whooping Cough.

There was no serious outbreak of Whooping Cough. One death from this disease was recorded.

Epidemic Influenza.

Epidemic Influenza, in the form it appeared ten or fifteen years ago, is now unknown in the District. Each year we have one or two outbreaks, but it has gradually lost its virulence. We still, however, occasionally meet with a type of case, (extremely common in the earlier epidemics), in which we find all the members of a family having been simultaneously attacked with Influenza, one dies in a few hours with all the symptoms of Cerebro-spinal Meningitis, while the others exhibit nothing beyond the usual symptoms of mild Influenza.

The deaths from Influenza were 5 in number.

Phthisis.

There were 24 deaths from Phthisis; males 11, females 13. This is the same as last year's total. Eight occurred in each of the sub-districts.

Cancer.

There were 25 deaths from Cancer; males 10, females 15. Of these, 7 occurred in the Brigg, 11 in the Barton, and 7 in the Winterton Sub-District.

Accidents.

There were 8 accidental deaths. Of these, 4 were drowned, 1 burned, 1 killed by a crane, 1 killed by a cow, 1 by a fall.

Suicides.

2 deaths, both by hanging; male I, female I.

The Health of the District.

The past year has been an extremely healthy one. The death-rate is below the average. The infant mortality is the lowest for ten years. The number of cases of Scarlet Fever notified is the lowest for ten years. The District was never so free from measles. There was very little Whooping Cough. Diphtheria was the most serious outbreak, and, in it, the cases were mild and the mortality low. The number of cases notified as Typhoid Fever, (27), was above the average, but the number of deaths from this disease, (2), was not high. The education of the District has not been seriously interfered with, only in one instance have schools been closed.

Sanitary Improvements, Sewers, etc.

In dealing with the infectious diseases, I have already mentioned some of the measures taken to safeguard the health of the District. At Messingham, in the yard where the cases of Typhoid occurred, the water supply and several sanitary matters

required attention—an order was issued for the work to be done at once. The inspector was instructed, (if delay in carrying out the instructions occurred), to proceed with it himself. In all other cases, where any nuisance was found to exist, it was at once attended to. A summary of the work done, will be found on the last page.

During the year, new public sewers have been laid down in the following Districts.

Barrow	••••	215 y	ards	of 9 in.	sanitary pij	pes
Ulceby	••••	18	,,	15	,,	
Goxhill"	••••	120	,,	6 and 9	,,
